Udaipur, Rajasthan, India

Summary

Cybersecurity enthusiast experienced in secure backend development, SIEM platforms, API security, threat detection workflows, and monitoring pipelines. Skilled in Linux systems, authentication, observability, distributed systems, threat detection workflows, caching strategies, and secure architecture design with strong focus on performance, monitoring, and application security.

Technical Skills

Security	Wireshark, Burp Suite, Nmap, JWT Authentication, RBAC, CSRF Protection, Secure Cookies, Shell Scripting,,API Security, Linux Commands
Backend Development	Node.js, Express.js, Django, REST APIs, Microservices, Zod Validation, Postman
Programming	JavaScript (ES6+), TypeScript, Python
Databases	PostgreSQL, MongoDB, MySQL, Redis (Caching, Pub/Sub, Session Store)
DevOps & Monitoring	Docker, Nginx, Git, GitHub Actions, Prometheus, Grafana, Loki, Jenkins
System Design	Distributed Systems, Event-Driven Architecture, Scalability, Message Queues

Selected Engineering Projects

Sentinel-Logs (SIEM Platform)

Node.js, PostgreSQL, Docker, Grafana

[GitHub: 05tanish/sentinel-logs](https://github.com/05tanish/sentinel-logs)

- Built a self-hosted SIEM system for real-time security log ingestion from syslog, APIs, agents, and file-based inputs.
- Developed log normalization pipeline supporting Syslog, Nginx, UFW, Windows Events, and JSON logs with structured field parsing for security analysis.
- Designed rule-based detection for SSH brute-force, privilege escalation attempts, firewall events, and repeated authentication failures.
- Implemented secure authentication system using JWT authentication, RBAC authorization, bcrypt hashing, account lockout protection, and audit logging.
- Optimized PostgreSQL queries using indexing strategies and connection pooling for efficient log storage and retrieval.
- Integrated Prometheus, Grafana, and Loki for centralized monitoring, logging, and observability.
- Deployed containerized system using Docker Compose with Nginx reverse proxy for isolated self-hosted deployment.

Jain Namkeen (Secure E-commerce Backend)

Node.js, PostgreSQL , Redis

[GitHub Repository: 05tanish/JainNamkeen](https://github.com/05tanish/JainNamkeen)

- Developed secure e-commerce backend with JWT authentication, OTP verification, RBAC, and Redis-backed session management
- Implemented Zod validation, SQL injection prevention, XSS sanitization, CSRF protection, and secure cookie handling
- Applied rate limiting, Helmet.js security headers, strict CORS validation, and Docker network isolation
- Built audit logging and monitoring pipeline using Prometheus, Grafana, Loki, and Redis-based event tracking
- Developed and tested REST APIs for authentication, cart, orders, and payment-related workflows using Postman
- Improved backend reliability and security posture through centralized monitoring and protected API workflows

Certifications

- Cyber Security Training — iTrust (Singapore)
- CyberSecurity Internship — CSRBOX
- Red Hat System Administration (RH124)
- Software Developer Certification — HackerRank
- Full Stack Development — GeeksforGeeks

Education

Bachelor of Technology (B.Tech) in Computer Science and Engineering

2023 – 2027*

Techno India NJR Institute of Technology, Rajasthan Technical University, Kota

CGPA: 8.3
